INTRODUCTION OF LAMINATED PLYWOOD

- Essentially, Laminated Plywood is any piece of Plywood that has had a laminate or film face applied directly to one, or both, of the faces on a raw Ply wood substrate. These laminates come in many different varieties, offering different colours, textures, and grain.
- A lot of time, cost and effort that goes into manually gluing laminates over plywood can be prevented by using prelaminated plywood sheets.
- What consumers must also understand is that there's a difference between prelaminated particle boards and laminated plywood. Most of the trendy ready made furniture is made from pre-laminated particle boards or prelaminated MDF(Medium-density fibreboards) and not from laminated plywood. Not only is such furniture of poor quality and strength but also has a short life. So, if you prefer furniture that lasts a lifetime, go for laminated plywood.
