# INTRODUCTION OF ORIENTED STRAND BOARD

---

## WHAT IS ORIENTED STRAND BOARD

---

OSB is a type of engineered wood, formed out of compressed layers of wood strands with adhesives (wax and synthetic resin).

Strips of wood in each layer are placed strategically rather than randomly to give it strength.

## WHY CHOOSE OSB?

---

- It's cheaper than Plywood
  - It's thicker and denser which enhances it's strength and load bearing capacity.
  - It's considered more environment friendly than plywood as smaller, younger trees can be used to produce it making it more sustainable.
  - VIVRE OSB is completely waterproof.
